

Press Release

Intelligent Sensors by Thermokon installed in the BMW World Munich

Right next to the BMW group headquarters, the BMW Museum and the BMW main production plant, the adventure and supply centre of BMW "BMW World" opened its doors on 17 October 2007.

By the opening of BMW World in October 2007 a new architectonic highlight was created in the North of Munich which is already counting to the five most popular attractions of the Bavarian capital. This fact is not only justified in the individual and customized supply of cars or the regular product shows, but specially much in the demand for cultural events and the varied catering trade.

One of the top events for kids and teens is the Junior Campus, in which 7-13 year olds can get knowledge in the field of mobility in a playful way. The exclusive presentation of the automobile range and motor bikes, interactive exhibits and a forum of events combined with latest technology for any kind of event complete the offer.

Via the company JCI-Regelungstechnik Munich, Thermokon supplied temperature and humidity sensors of the standard product range as well as room operating panels in different designs for control of air-conditioning and ventilation.

Thermokon's intelligent sensors enable an efficient energy-saving and a significant increase of the physical and emotional well-being of people in the rooms. Thus, the Thermokon brand is used in almost all BMW plants and buildings.
